NOTICE

The Appomattox Frozen Food Locker is now scheduled to open for business Saturday June 6. In the meantime those persons who have rented lockers or contemplate renting lockers and have berries and peas that they wish to freeze prior to June 6 can do so by processing and packing them themselves and the locker plant will freeze them temporarily in freezer units and transfer them to the locker after the refrigeration is turned on June 6. We have space to handle about 1000 quarts on the above basis. There will be someone at the plant from 2 P. M. til 5 P. M. daily until June 2 to receive berries and peas as long as there is space to store them. Beginning Tuesday June 2, Mr. W. D. Morris who will operate the plant will be present to show you thru the plant and give you any information that you may wish concerning the plant and its operation.

There are still available lockers for those desiring them and we urge you to reserve your locker now as when the present lockers are rented it will take approximately six months to secure additional lockers.

We will have sugar for all patrons for use in processing berries and fruit, Details may be gotten at the plant. We also have packaging materials for fruits and vegetables which also may be obtained from the locker plant.

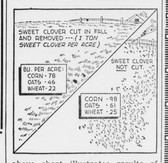
SHORTCHANGE THE SOIL

The benefits of clover depend on how much nitrogen and organic matter it produces, and how much of those materials is returned to the soil as clover or as manure. When sweet clover is cut in the fall and removed from the field the resulting loss in nitrogen and organic matter reduces the yields of crops following in the rotation. When clover is not cut, those yields increase.



above chart illustrates results of crop rotation tests at the Carthage soil experiment field by University of Illinois agronomists. In a three-year rotation of corn, oats and wheat, sweet clover was seeded in the wheat and plowed under for corn the next spring. On one plot the stubble sweet clover was cut in the fall and removed. On another plot the sweet clover was left uncut. Both plots were plowed the following spring. The effect on yields of corn, oats and wheat following on each plot is summarized above.
